

Energy and environmental policy of Mesa Parts

Mesa Parts commits itself to a responsibility for society, employees and environment. This responsibility for environmental protection means to use resources economically and contribute actively to preserve nature and environment. This environmental policy is part of our long-term corporate policy.

For our products and their production we strive for economical, environmentally friendly and energy efficient solutions. We undertake to comply with all regulatory requirements, laws and regulations, whereby we are guided by the economically viable state of the art in all measures relating to environmental protection and energy management.

We pursue the implementation of our goals as part of an energy and environmental management system. This system is regularly evaluated and improved if necessary. In addition, we are pursuing the implementation of our goals within the framework of the CIP process.

Energy and environmental management requires responsible employees at all levels who actively participate in the realization of these principles and think along with them. We prefer business partners who have similar principles regarding environmental protection and energy efficiency. This environmental policy is supported by all Mesa Parts facilities.

We prefer business partners to support comparable principles in environmental protection.
The executive board.

Company management and employees are committed to this energy policy.
